Tequila is produced in only 5 specific regions of Mexico and can be made from over 30 varieties of agave plant. Not all Mezcals are Tequilas, however. Mezcal, like Tequila, is made from the agave plant, but Mezcal can be produced in 9 separate regions of Mexico and can be made from over 30 varieties of agave plant.

All Tequilas are Mezcals; not all Mezcals are Tequilas. Tequila is produced in only 5 specific regions of Mexico and only using the Blue Agave plant. Mezcal, however, can be produced in 9 separate regions of Mexico and can be made from over 30 varieties of agave plant.

Blanco: (also called silver) is the most common tequila. It is not aged, so it offers a more undiluted flavor from the agave plant. Blanco or silver tequilas are typically clear in color.

Añejo: Tequila aged for over three years is called an Extra Añejo. Extended aging creates a darker, mahogany-like color, and is so rich that it becomes difficult to distinguish from other quality aged spirits. Extremely smooth and complex.

Reposado: Tequila aged for two to three years is called a Reposado. Extended aging creates a lighter, golden color.
